**At European Congress of Radiology ECR 2010 of Wien  
Esaote presents ESTENSA the newly-conceived RIS/PACS software**

At European Congress of Radiology (4<sup>th</sup>-8<sup>th</sup> March 2010), ESAOTE presents ESTENSA, the newly-conceived RIS/PACS software, fully dedicated to simplify and make more efficient the workflow in diagnostic departments, providing the rapid and effective implementation of filmless and paperless hospitals.

ESTENSA collects the newest trends in workplace user-customizable configuration concept, which become largely independent from workstation's physical location and hardware used.

ESTENSA shape the future of radiology reporting, being the first to introduce, in the international RIS PACS community, a Structured Report system, that allows radiologists to innovate the way they produce and distribute reports: ESTENSA allows for standardized radiological outcomes and the sharing of all findings, key images, observations and associated measurements with specialists and general practitioners.

ESTENSA's wide range of dedicated analysis packages gets inside CT, MR & PET scans, thanks to the newest 3D image visualization, "virtual navigation" and processing technology, which turns images into clinical decisions and helps for an enterprise-wide distribution of studies and an improvement in exams's quality and Patient's safety.

Specific functionalities for managing all the activities and high-end tools for streamlined workflow are provided for all those clinical departments external to radiology, which make extensive use of radiological images (Interventional Radiology, Nuclear Medicine, Radiotherapy, Orthopaedics, Operating Room, etc.).

EBIT AET - Esaote's Business Unit dedicated to Information Technology - is a leading high-tech software products' manufacturer for medical image and information management.

Its software platform suite provides top-line solutions for Radiology and Cardiology Departments. It's leading-edge technology provides a new approach to workflow, anticipating solutions for future incoming requirements.

The Esaote Group is leader in the sector of biomedical equipment (in particular, ultrasound, dedicated magnetic resonance and software to manage the diagnostic process). With 310 million euro consolidated sales in 2009 (+5% in comparison to 2008) today Esaote gives work to about 1350 employees, 20% of which employed in the R&D activities. Esaote is present with its industrial and research units in Italy (Genoa, Florence, Naples) in the Netherlands (Maastricht), in France (Paris), and in China (Shenzhen). Esaote is internationally recognized to be one of the "Top Ten" world's leading diagnostic imaging companies.

Information concerning Esaote and its products are available on the Internet site at the address <http://www.esaote.com>
