Sono-Elastography is an ultrasound imaging technique that has enhanced the diagnostic capabilities of clinical ultrasonography.

This 4th edition of the meeting is designed to address the most important topics on Sono-Elastography such technical advances, actual clinical applications, and future prospects.

The general experience with Sono-Elastography is growing with time, thus we have built the meeting as an occasion to share current knowledge and advances in this field.

Sono-Elastography adds valuable information to the study of all organs, potentially resulting in "a virtual biopsy". Because different elastographic modalities are available, our aim is also to help understanding which one is best suited for any given indication and which information can be obtained when using it. During this meeting the clinical applications and recent advances on Sono-elastography will be analyzed with Speakers coming from several Countries and with the participation of the Ultrasound Companies that have implemented this new technique in their ultrasound system.

We welcome you in this meeting of physicians and biomedical engineers who combine their knowledge and experience in the innovations of US.
