

PRESS RELEASE

360 Care Ultrasound Service purchase Esaote's MyLab™ Alpha Ultrasound system

360 Care Ultrasound Service is an expanding community based APQ, NHS service providing quality ultrasound imaging and reporting within the primary care setting throughout North East Lincolnshire. They carry out, on average, 650 examinations per month.

As a result of this expansion, a mobile ultrasound system with printer was required for general ultrasound, including transvaginal, musculoskeletal ultrasound and vascular work, in order to provide a service at multiple satellite sites.

“The MyLab™ Alpha ultrasound system impressed us with its versatility and high imaging quality in a range of modalities. It is user friendly and the aftercare has been excellent”. Carol said “This has allowed us to cope with the many and varied demands and the scope of examinations required by primary care clinicians”

In addition, they purchased a mobile stand enabling easy set up in any location and commented that “The MyLab™ Alpha stand and sundry items that are necessary for an offsite clinic all fit nicely into one of the sonographers Ford Ka!” The MyLab™ Alpha also functions very well using the static stand with multi-probe (up to four) connectivity in busy clinic at the main site in Grimsby.
