@HD is the Esaote technology to innovate ultrasound imaging and improve the systems' use. It represents our attention to the diagnostic value, optimizing all the aspects of the chain a signal has to travel through, starting from the echo generated by the patient's body up to the arrival on the system's monitor. It maximizes the efficiency of ultrasound scanning, leaving the sonographer free to concentrate on the patient.

**@XP** Technology sums up to faster overall system response thanks to a number of sophisticated MRI software techniques and a high-power workstation.

### @XP Performance enhancements

By combining sophisticated acquisition and reconstruction methods such as SpeedUp and TR reduction, eXP substantially improves the MRI examination by reducing scantimes and improving image quality..

- **Faster MRI**  
Shorter examination times mean more comfort for the patient and better system economics
- **Better MRI**  
Better image quality stands for easier diagnosis and better marketing of your MRI service
