

The John Radcliffe Heart Centre has purchased Esaote's MyLab™Alpha portable ultrasound scanner after expanding its services.

The Complex TTE Lead Cardiac Physiologist, Nicky Thornton said "With the expansion of our HF and ICC service we were able to purchase a new echo machine and after trialling Esaote's MyLab™Alpha we decided to purchase one. It's a comfortable compact and easily portable machine due to its very reduced size and weight, simple to use and with great applications support"

Jo Mundy, Esaote's Product and Marketing Manager, said "The team at the John Radcliffe kindly trialled the MyLab™Alpha, the feedback I received on its performance was brilliant and I was delighted when they decided to purchase one for the Echo Department. It offers portability with a boot-up time around 20 seconds. This combined with the excellent image quality and the fact it seamlessly integrated with their PACS and reporting system made it great value for money."
